

SOC Role in Blue Team :-

Task 1:- Introduction

You've learned about SOCL1 analyst role in junior Security Analyst Intro room. But where is it placed in company structure? Who is overseeing your team? What other security departments exist? What skills you need to advance through your career ladder? Let's find out!

Learning objectives:-

- Understand concept and purpose of Blue Team
 - Find about your career path as SOCL1 Analyst
- ↳ Explore a place of SOC within company structure.

Security Hierarchy Task 2:-

Cybersecurity priorities are different for every company. For law firms, the goal is privacy of legal documents. For factories the availability of production lines. For Hospitals patient safety.

That's why every company has unique security approach and security team structure. Let's look into high level

Example of it:-

Security Departments:- In tiny companies, The IT department takes role of securing a company.

Small to medium sized companies may have generic 'Information Security' that does all sort of tasks.

We will focus on bigger companies with CISO overseeing multiple security teams, each handle specific task:-

Red Team:- Offensive security experts, pentesters or ethical hackers who look for security issues.

GRC Team:- Specialists managing policies and ensuring compliance with regulation like PCI DSS.

Blue Team:- Defensive security experts like SOC Analysts, engineers or Incident responders.

Quiz:-

1) Which senior role typically makes key cyber security decisions?

A) CISO

2) What is common name for roles like SOC analysts and engineers?

A) Blue Team

Task 3: - Meet the Blue Team: -

Blue Team is about defensive security, meaning it constantly monitors for attacks and tries to respond to them quickly. Depending on a company's size and sector, Blue Team can include lot of different sub and subdepartments, usually counting 3 to 50 members total. Let's explore most common Blue Team departments.

Security operation center (SOC): -

SOC manager

SOC L2 analyst

SOC Engineer

SOC L1 analyst

SOC L1 analyst

SOC L1 analyst

SOC Team first line of defense

usually operates 24/7

& creates Detection Rules

& investigate security alerts

& collect and monitor logs

& cooperate with IT team

& writes summary Reports

* SOC is central hub for an organization's cyber security - they are first line of defense, works with various alerts, handles most attacks. SOC is usually composed of following roles: -

* L1 analysts: - Junior members who triage alerts and pass complex case to L2

manager - A person who

* L2 analysts: - Experienced members who investigate more advanced attacks

manages the whole SOC team.

* Engineers: - Experts in configuration security tools like EDR or SIEM

Cyber Incident Response Team (CIRT): -

CIRT / CISRT / CERT: - Cyber Firefighters

CISRT Manager

Forensics lead

usually called on Demand

& support SOC with Analysis

& handle critical incidents

Threat Intel Expert

Threat Hunting Expert

Malware Analyst

& identifies hidden threat

& perform deep forensics

& recover breached systems

If SOC experts not enough or incident goes out of control, you urgently called firefighters - CIRT

also called CISRT or CERT. The members should have broad knowledge of cyber threats and handle breaches.

without depending on tools like EDR or SIEM. A CIRT job is stressful and responsible but also rewarding.

CIRT Examples: -

* JP CERT: - Japan's CERT handling nation wide breaches

AWS CIRT: - investigate

* Mandiant: - A private team responding to global cyber incidents

Security incidents of AWS customers.

Specialized Defensive Roles: -

Roles Supporting Blue Team

DevSec and penetration Tester, GRC Auditor, AppSec Engineer, Threat Analyst, AI Researchers

large companies technology focused startups and government agencies often require narrow and specialized Blue Team Roles - Existing & highly valuable, but require deep topic knowledge & broad experience in broader field like SOC or IT. These narrow roles can include:-

* Digital Forensics Analyst:- uncover hidden threats in disk and memory } AI Researcher:- study AI threats and how to defend against them.
* Threat Intelligence Analyst:- Gather data about emerging threat groups } * App Sec Engineer:- Maintain a secure software development life cycle.

Quiz:-

1) Does Blue Team focus on defensive or offensive security?

A) Defensive

2) Which department handles active or urgent cyber incidents?

A) CIRT
