

Blue Team Introduction: -

Task 1: - Junior Security Analyst Journey: -

Security Analyst Journey: -

Welcome to cybersecurity, a world of evolving threats, where every click could hide an attack, and every attack could destroy the business.

* This is why we need defenders who analyze attacks, stop breaches, and keep companies safe. Your journey as Junior Security Analyst begins here, in this toy hack me room.

* You start your work day from quick scrolling through cyber news from last week.

As usual, big companies are getting breached, threat groups are running full scale attacks, and new vulnerabilities are popping here and there.

Your daily duties: -

As Junior Security Analyst, also called as SOC L1 analyst, you work in 24/7 SOC team and mostly review security alerts together with your colleagues.

* During your work shift, you typically: -

- Monitor and Investigate various security alerts
- Participate in SOC brainstorms and workshops
- Cooperate with other teams to keep your company safe
- Constantly learn and discover new attacks and defenses

Quiz: -

1) Which team do you work with as Junior Security Analyst?

A) SOC

Task 2: - Security Operations Center.

SOC and your Team: -

You are not alone in monitoring the alerts and securing the whole company.

A lot of people assist with your job. SOC engineers are collaborating with

Security tools (Configuring means setting up, maintaining specific rules, permissions to system properly protected). Senior analysts are helping with complex attacks, and manager is trying to keep everything in control. A SOC is big team that protects the company, each role in its own way. Now let's meet your colleagues!

1) Will Croiffin
Senior Analyst

Will is your closest colleague. He helps you and other Junior Analysts when something is unclear and handles complex cases after you do initial analysis.

2) Corey Stevens
SOC Engineer

Corey doesn't have shifts and doesn't analyze the alerts. Instead, he maintains security tools and configures alerts to make your analysts' job easier.

3) Emily Conway
SOC Manager

Emily tries to keep everything under control. She reports SOC results to top management and makes sure you're not lost in that big new cybersecurity world.

4) Daniel Herrera (Incident Responder)

You don't work with Daniel every day, but when he's online, you know something serious has happened. He is called on demand during major incidents.

Your Daily Duties: -

Are you inspired by your colleague's work and wish to advance to their roles? Cybersecurity is a broad field, and with time you find a path that excites you most. But before you gain work experience as a Junior Security Analyst, along the way you have many lessons and challenges,

- * Detect and prevent data stealer infection on coworkers' laptops.
- * Analyze and stop phishing campaigns targeting the finance team.
- * Participate in bigger incidents, such as full-scale ransomware attacks.
- * Team up with your teammates to build detection rules and automations.
- * Go beyond cyber and understand how companies operate from inside.

A Day in the Life of a Security Analyst (Task 3): -

Being a Security Analyst

Being a cybersecurity practitioner is not easy. You have to constantly learn new...

things. During 8 hours shift, you might be buried under a mountain of tickets - the alerts and tasks that you need to resolve in timely manner. Still job is fun and rewarding. Especially after you stop real threat from damaging your organization. Even better, its fascinating to know how attacks you hear about news actually happens in real world.

Next continue in lab in Github's respiratory file will be available.
